Backend-heavy software engineer (4+ years) in fintech lending; hands-on with **RAG**, **MCP**, and AI-assisted development.

WORK EXPERIENCE

Freecharge Sep 2025 – Present
Backend Software Development Engineer Gurugram, India

- Engineer reactive **Spring WebFlux** services (**Kotlin**, **MongoDB**, **Redis**, **Kafka**) for the **Maximus** platform powering **Axis Bank**'s digital customer acquisition and pre-approved credit offerings. The shared **Income Assessment Service** handles **96M+ requests/month** and **137K+ applications** across **8+ lending products**.
- Led the refactoring of the shared Income Assessment Service for **dynamic runtime version resolution** per lending product, so a hotfix ships to **one product** without regression or sandbox testing for the others.
- Built a reusable **Spring WebFilter** for **AES request/response encryption** of exposed APIs to meet **RBI security guidelines**; adopted across **8+ lending microservices**.
- Authored Markdown context for the **SAGA-based Step Framework** and Income Assessment Service, onboarded to the organization's **GitHub Copilot MCP server** for **AI-assisted development**; reusing it for internal **RAG**.

Comviva Gurugram, India
Senior Product Development Engineer Jan 2024 – Jul 2025

- Contributed to decomposing a legacy **monolithic** billing and subscription platform into **9 domain services** with **TMF-compliant APIs** for Vodafone India (**180M+ subscribers** across domains).
- Built Vodafone-specific features and reporting REST APIs (**Spring Boot**, **Docker**); supported Phase 3 sandbox integration.
- Mentored new hires (**ComCubs**) through knowledge transfer, code reviews, and engineering best practices.

Product Development Engineer Feb 2022 – Dec 2023

- Developed a **React.JS** management console for the billing and subscription platform, with **Spring Security**, **JWT**, and **LDAP** authentication and authorization.
- Improved API response time by **30%–50%** through payload compression and pagination.

PROJECTS

ContextFoundry | *RAG platform for microservice codebases* (personal project; Python, FastAPI) GitHub | Live Demo

- Built to apply RAG research in practice: **hybrid retrieval** (code embeddings + **BM25** fused with **RRF**), **AST-aware chunking**, caller expansion, and line-level citations.
- **Tenant-isolated** Qdrant collections and an **SSE-streaming** FastAPI backend with multi-provider **LLM fallback** (Bedrock, Groq, OpenAI).

SKILLS

Languages : Kotlin, Java, Python, JavaScript, SQL
Frameworks & Libraries : Spring Boot, Spring WebFlux, Spring Security, FastAPI, React.JS
Databases & Messaging : MongoDB, Redis, Apache Kafka, MySQL, Elasticsearch, Qdrant
AI / LLM : RAG, Hybrid Retrieval (Dense + BM25, RRF), Embeddings, MCP, LLM Orchestration, LlamaIndex
Tools : Git, Docker, Jenkins, Kibana, JUnit, Mockito, Mockk, SonarQube, JMeter, Maven, Gradle
Concepts : Microservices, REST APIs, Reactive Programming, Distributed Systems, Event-Driven Architecture, SAGA

EDUCATION

Manipal University Jaipur | B.Tech. in Information Technology | CGPA: **8.89/10.0** Jaipur, India | 2018 – 2022
